

WEEK OF JANUARY 9, 2023

for the
Washington State
House of Representatives

The Environmental Priorities Coalition is a coalition of over twenty-five leading environmental groups who lobby in Olympia on a regular basis and organize around a set of priority bills each legislative session. We established **four** to be our highest priorities for the 2023 Legislative Session, they are listed below. As in the past, we will be sending you this weekly “Hot List” to assist you in your efforts to promote this common agenda.

Please feel free to contact Clifford Traisman (Washington Conservation Action, previously known as Washington Environmental Council & Washington Conservation Voters) at clifford@ctassociates.org if you have any questions regarding our positions on any bills affecting the environment, not just those found on the Hot List each week. The Hot List can also be found [here](#). The four priorities for the 2023 legislative session are:

2023 Priorities

Investing in Climate Action (Budget Priority): The climate crisis means we need to cut pollution fast and while investing wisely to expand clean energy solutions as quickly as possible. In early 2023, Washington State will begin generating revenue from The Climate Commitment Act, our comprehensive, economy-wide carbon reduction program. Our Legislature must make smart investments in climate solutions that cut pollution and transition communities to a clean and equitable economy at the speed and the scale required to align with climate science. This session, the Legislature will start making the largest investments in clean energy, air quality, natural resource resiliency, and benefits to tribal nations and overburdened communities in state history. It is critical for our legislators to invest these funds equitably and strategically to provide the greatest benefits to all Washington residents.

Investing in Salmon Habitat (Budget Priority): Salmon runs continue to dwindle throughout the state – across the Columbia Basin, throughout southwest Washington, and around the Puget Sound region. Fortunately, experts know what it takes to protect and improve habitat for salmon: preserving streamside vegetation to keep water cool, decreasing stormwater and sewage pollution, removing or avoiding fish passage barriers like dams and culverts, maintaining healthy nearshore and estuarine areas. However, every year, lack of funding stalls most locally-vetted, and regionally-prioritized, salmon recovery projects. For the past several budget cycles, only 15 percent of the need has been funded. Now is the time to right-size salmon investments for the future.

Planning for a Climate Friendly Future (HB 1181/ SB 5203): Planning for a Climate Friendly Future requires the largest and fastest-growing counties and cities within them to reduce greenhouse gas emissions and vehicle miles traveled through land use planning. It requires all counties planning under the Growth Management Act

(GMA) to plan for resilience and to address the impacts of climate change in land use plans. In addition, it updates the transportation element of the GMA by incorporating transit and bike/pedestrian planning.

Washington Recycling And Packaging Act (The WRAP Act) (HB 1131/ SB 5154): In this state, more than 50 percent of our consumer packaging and paper goes to landfills, rather than being recycled. Across the planet, plastic waste litters our shorelines and open spaces. It is time to modernize our recycling system, to reduce packaging and to decrease plastic pollution. The WRAP Act tackles these problems by creating a set of graduated fees on packaging manufacturers based on the recyclability/sustainability of their packaging. The funding generated from this fee will then be used to fund our recycling system in Washington, including improvements in infrastructure, uniform access to recycling for residents across the state, and a harmonized list of what people can recycle. Recycling and reuse targets will be set. This bill will have the added benefit of shifting the costs for the recycling system from ratepayers to the manufacturers that have created the problem.

The following are the key environmental issues the House is considering the week of January 9th 2023:

House Committee Action

*House Committee on
Environment & Energy:
Public Hearing,
Tuesday 1/10*

HB 1033: Evaluating compostable product usage in Washington

- Creates a taskforce that would make policy recommendations to legislators on compostable foodware, to develop a statewide policy.
- A consistent statewide policy will help us get more food waste to compost facilities rather than the landfill.

*House Committee on
Environment & Energy:
Public Hearing,
Monday 1/9*

HB 1047: Concerning the use of toxic chemicals in cosmetic products

- The bill bans PFAS, formaldehyde, lead and other harmful chemicals in personal care products and cosmetics that threaten health and disproportionately impact women of color.
- The bill also requires the hazards of other cosmetic ingredients to be assessed and provides incentives for small businesses to transition to safer products.

*House Environment &
Energy
Committee: Public
Hearing, Thursday,
1/12*

HB 1076: Encouraging salmon recovery through voluntary stewardship.

- Salmon recovery is an existing legal obligation, and the Growth Management Act (GMA) already requires the protection of salmon habitats.
- This bill weakens existing law at a time when we need stronger protections in comprehensive planning to avoid extinction of salmon stocks statewide

*House Environment &
Energy Committee:
Tuesday 1/10*

HB 1085: Reducing plastic pollution

- Requiring refill fountains in new construction, so that people can easily refill their drinking water bottles
- Phasing out hotel plastic-packaged mini-toiletries such as shampoos, lotions and soap and phasing out the use of foam-filled floats that are used for docks.

*House Environment &
Energy: Public Hearing,
Thursday, 1/12*

HB 1170: Improving climate resilience through updates to the state's integrated climate response strategy.

- Climate resilience and natural climate solutions are eligible for funding under the Climate Commitment Act; this bill updates statewide, inter-agency strategy for addressing climate risks and improving resilience of communities and ecosystems
- Strengthens requirements for agencies to consider climate impacts in funding and activities, and improves cross-agency coordination of state response to federal climate resilience funding opportunities.

about the coalition

The Environmental Priorities Coalition is a network of over twenty-five leading environmental groups in Washington state that influence policy at the state level. For over a decade, the Coalition has selected joint priority issues to work on during legislative session to help focus environmental community resources and best achieve our shared goals.
